

\$BBTC
WHITEPAPER

Who is Baby Bitcoin?

BabyBitcoin is a token deployed on the SmartChain network with an initial supply of 1Q of tokens, the token is part of the increasingly supported and growing "memecoin" community

Why should you buy BabyBitcoin?

Our name comes from the largest cryptocurrency in the world, in which millions of investors deposit their funds as a store of value, which is also one of the most valued in the market. Our BabyBitcoin is the small version of Bitcoin. Thanks to the SmartChain network, our fees per transaction are much cheaper and easy to send from one wallet to another. Every time the community expands, the coins in circulation decrease through our automatic burning system and as the number of transactions increases, a percentage will go directly to the DeadWallet. On the other hand, people who are not interested in making transactions and only want to save their savings will have 2% of the purchase / sale transactions that are made, which makes their money grow constantly, delivering a higher percentage than that of a normal bank.

What is our target audience?

Our main objective is EVERYONE, although of course we must make our token reach each wallet so that it is preserved and used without any issues, starting with people who are already familiar with the crypto world who already know the behavior of the market. Once we have earned their trust, we can then proceed with the people who are not within this medium, making a planning to implement introductory programs to the medium, giving relevant information so that people can start using BabyBitcoin.

Does BabyBitcoin have a project?

Absolutely! We have realized that there are still many people who do not know the benefits of investing in cryptocurrencies, as well many people who do not trust or have faith in them since they do not know the data or how to get involved. Our plan is to formulate a series of programs for the correct introduction to the crypto market, where we will explain the different niches, segments and explaining from the basic concepts to the most complex sections. On the other hand, we think that it is essential to walk towards the future, therefore we will support environmentally friendly programs.

To have a future, we need a place to live in. We must also add that in the future we have planned to launch our own brand of baby products such as clothes, accessories and toys so that we may make a leap forward with our community by allowing our products to be purchased with BBTC as well traditional forms of payment.

Where can you buy BabyBitcoin?

BabyBitcoin is deployed on the SmartChain network which has Pancake Swap as its main exchange.

Is our security system reliable?

Of course! Every individual contract displayed in the SmartChain can only have changes if the Metawallet is connected on Remix.

Your cryptocurrency can never be considered a scam, why?

Well, reviewing the information on the web, we find that the distribution among the owners of the coin is 10% which is a minimum, 90% focus on improving and publicizing the token. The plan is to burn 50% of which 35% have already been burned, thus leaving the remaining 15%, which will be burned when we reach 5M MC (Market Cap). Continuing with the Tokenomics, we have 15% saved for future advertising payments.

For my people who are supporting us, here are the all the details as we believe that you deserve them.

As we show on the page, 15% will be used for advertising. Regarding this 15%, we are very careful with that percentage. For now, moderators and administrators are the ones who receive small fractions for their support in the groups.

We have burned 35% which was a number chosen by the community, leaving 15% pending for a future burn when we reach 5M of Market Cap

We are 6 owners, who are very grateful for the support we are having from the community, each of us has the following percentages respectively, 4 of us have 2% and 2 of us have 1%, added together they make up the 10% that this reflected on the web

Liquidity had a problem due to the pre-sale since part of the percentage was taken by DxSale, leaving with 3% of the 25%. We are preparing to add more liquidity since it may be insufficient and in this case, it will come out of wallet number 2 that has 24% taking away 15% of the aforementioned burning leaving us with 9%, which we will not do yet because marketing expenses absorb a lot of investment.

I appreciate your support, I am open to inquiries! Thanks to all.

What makes us different from other cryptocurrencies?

Our future plans are ambitious, our vision is to be one of the most useful and renowned cryptocurrencies, offering the community physical products as well as in the Blockchain medium. The fusion of these two worlds will complement our project, thus making a significant and revolutionary difference.

What are the technologies implemented in the creation of BabyBitcoin?

We use the Binance BEP20 network as a basis to facilitate less costly transactions for the user on the Blockchain medium.

Was the development of BabyBitcoin complicated?

Our team knew that BabyBitcoin would be a project full of challenges and that with the appropriate strategy, planning and excellent management, we will have no major problem to overcome any and all obstacles. The complexity of our project strengthens us day by day and pushes us to move forward to deliver the best of BabyBitcoin to our community.

Finally, adding that many of BabyBitcoin's plans are not reflected in our V1 whitepaper since, as we progress, these plans will be implemented. The community is aware of our hard work and we will always appreciate your unconditional support.
